

**PURPOSE:** To provide better lighting for the volleyball court behind Goen and Frazer Hall.

**INTRODUCED BY:** Theodore Lai

**BE IT RESOLVED BY THE MISSISSIPPI SCHOOL FOR MATHEMATICS AND SCIENCE SENATE:**

**SECTION ONE (REASONING):**

Volleyball is typically played from 9:00 p.m. to 10:25 p.m. on weekdays and 9:00 p.m. to 10:55 p.m. on weekends: Seniors can play until 11:55 p.m. on weekends. During these times there is no other light source other than two light poles that are too dim for players to properly be able to observe their surroundings. By providing more and better lighting for the volleyball court students can both have fun and be safe.

**SECTION TWO (RESPONSES):**

Response 1 (Anonymous):

The volleyball club has a lot of events usually at nighttime when it's really dark so when everybody goes out there to play there are only two lights and they're on opposite ends of the volleyball court and without fail everyday someone will complain about the ball going into the light and you can't really see and not only that the lighting is inadequate so sometimes you can't even see the ball and it's just hard to play

Response 2 (Anonymous):

The current lighting sucks because, due to the lights that are high up, people cannot see where the ball is, so people are not able to play properly. I think adding lights lower to the ground will be better. Lighting around/on the sand pit, which will make playing volleyball more enjoyable. In general, it's just really dark and more lights would help.

Response 3 (Anonymous):

Volleyball nights are a great way to get wellness, have fun, and connect with others. The one downside is that (as long as the sand is not too cold) there is not enough lighting. Other than the too tall and too dim streetlights, the volleyball court is illuminated by just the lights from the pavilion. It's a very noticeable and fixable problem. If you come out to play, you will always hear, "I missed it because of the light!" or "I can't see the ball!" Installing proper lighting would not only help the visibility but also contribute to the fun that people have when playing volleyball.

Response 4 (Anonymous):

I think that adding lights to the outdoor volleyball courts will help with seeing the ball much better due to the fact we tend to play later at night. The lights that are there now do not adequately light the entire court. Adding lights to the court will increase visibility.

**SECTION THREE (PROPOSED ACTION):**

Lights will be installed on top of the pavilion after Mr. Fondren finds a light source that would effectively light up the volleyball court behind Goen and Frazer Hall.
