

PURPOSE: To bring attention to students without a lunch period by putting a vending machine in Hooper.

INTRODUCED BY: Jennifer Bui

BE IT RESOLVED BY THE MISSISSIPPI SCHOOL FOR MATHEMATICS AND SCIENCE SENATE:

SECTION ONE (REASONING):

Lunch is important to students' academic, social, and emotional development. Particularly at MSMS, where students are put under immense amounts of pressure and stress. A significant number of students are currently going without a scheduled lunch period. Teachers who understand the importance of lunch allow their students to grab lunch at the beginning of class. However, some teachers have raised concerns about this practice, citing that it cuts into valuable class time which could be better spent on learning.

Providing students with convenient access to a vending machine filled with a variety of healthy and delicious snacks can have a great impact on their ability to stay focused and maintain their overall well-being throughout the day. Implementing this in the school will allow students a way to easily grab a quick snack between classes or during breaks, without having to worry about leaving the school premises or running late.

SECTION 2 (RESPONSES):

Response 1 (Anonymous):

I have lunch, but I had to drop classes in order to have one. I think a vending machine would really help because there are a lot of kids who don't get to eat. In addition, sometimes student have to use their off-blocks to make things up or to study. Having a vending machine would allow us to get small snacks and with the microwave in the reading room now, it would make sense to have more things we can have to eat besides the cafeteria. If that was the case, I wouldn't have had to drop genetics and an elective. Now that I wanted to be able to have lunch I have to take more classes my senior year.

Response 2 (Anonymous):

I don't have a lunch period, and a lot of the time, it can make my day super draining and tiring. Having a vending machine would help me get through all of my classes because I would definitely not be as tired if I had easily accessible drinks and snacks throughout the school day.

Response 3 (Anonymous):

As a student at MSMS, there have been many times I had to skip lunch in order to study. I would sit in the reading room feeling like I was starving. It was times like these that I sympathized with my friends who didn't even have a lunch block. I understood that it was their choice, but they

still shouldn't have to deal with starving in between classes. That's why I believe we should add a vending machine. This would give kids an opportunity to eat something that can fuel them and help them endure classes for a couple more hours. Not only that, I believe the addition of a vending machine can help people refocus on their schoolwork. With a vending machine, there will be many benefits for the students and even the teachers.

Response 4 (Anonymous):

I'm fortunate enough to have a lunch period, but oftentimes, I can get hungry in between classes or before I want to complete my work service. This morning, I wanted to do my work service right after class, allowing myself enough time to clean everything required. However, I noticed I was hungry, and since the cafeteria wasn't open by then, I had to go back to the dorms to grab a snack. This meant less time for my work service, and I had to return another time to complete the rest. I believe my issue could have been resolved if Hooper were equipped with a vending machine or a snack bar. This would also help tackle the hunger I often face during the periods before lunch, where having just a small snack could increase my productivity.

Response 5 (Anonymous):

I think having a vending machine would help people who don't have lunch and in doing so it would let them be able to eat instead of going without food for eight hours. That is unhealthy and can cause serious health issues if not taken care of.
