

**PURPOSE:** To create a method to report teachers using AI to create or grade assignments.

**INTRODUCED BY:** Tejbir Banipal

**BE IT RESOLVED BY THE MISSISSIPPI SCHOOL FOR MATHEMATICS AND SCIENCE SENATE:**

**SECTION ONE (DEFINITIONS):**

An assignment shall be defined as something submitted by a student for a grade.

A “take home” assignment shall be defined as an assignment that can be taken outside the classroom to be completed.

Personally identifiable information shall be defined as the name, date of birth, or other information which could allow a reasonable person to know which student submitted a report.

**SECTION TWO (REASONING):**

In the future, AI could be considered as a tool to help with learning, however currently it is not sophisticated enough to help students learn effectively or to create assignments for students to complete. In its current form if AI was used to create assignments, it could hallucinate causing for it to create questions that are contradictory. When used for grading, the results could be disastrous, due to AI being prone to making things up, it could randomly mark incorrect students work as correct and correct students work as incorrect. This would make the grading system unfair for everyone.

The current method of reporting teachers has not once yielded a report of a teacher using AI, moreover the reporting portal is hidden so far in the MSMS website that it is impracticable to find, and many students might not know it even exists. This proposal directly sends all students an email to report teachers rather than having them go and find the reporting tool on the MSMS website.

This proposal would create a new method for MSMS students to directly report teachers for using AI in an anonymous fashion and, with this reporting method being fully anonymous, students have no fear of retaliation from teachers. Along with this, administration would only receive reports which could be substantiated by the SGA officers, this would mean that administration would only get the reports that are found to be true and accurate saving administration the time of having to see if the reports are correct.

Finally, this proposal does not force administration to act a specific way, rather it gives them substantiated reports of AI usage to ensure that they know if AI was used. Furthermore, administration has stated that getting these reports would not be burdensome.

This proposal is a step in the right direction to ensure that teachers do not use AI to create or grade assignments.

### **SECTION THREE (PROPOSED ACTION):**

The Student Government Association shall create an anonymous reporting method within seven (7) days which allows students to submit the following information:

- a) A description of the assignment using artificial intelligence;
- b) A statement as to why the student believes artificial intelligence was used in whole or in part to create the assignment;
- c) If the assignment is a take home assignment, a photograph of the assignment;
- d) An acknowledgment that the report is made in good faith; and
- e) The name of the teacher that gave the assignment.

Within five (5) days after the creation of the anonymous reporting method, a Student Government Association officer shall send an email containing the anonymous reporting method to all students. Within five (5) days of the end of each quarter, the Student Government Association shall submit a filed report via email to all Senators and Representatives containing all reports filed using the anonymous reporting method.

On the last day of each month excluding May, June, and July, the Student Government Association officers shall email administration reports that have been filed using the anonymous reporting method within that month which have been found to be true by a Student Government Association officer. When submitting these reports, the Student Government Association officers shall also include how the report was verified.

Notwithstanding any other provision of this resolution, the Student Government Association may not give the personally identifying information of any students filing or substantiating reports for any reason. Personally identifying information of students may not be given directly or indirectly, and if a student's personally identifying information is on the assignment submitted via the anonymous reporting method, the Student Government Association officers shall redact the student's personally identifying information.

~~The executive branch of the Student Government Association shall be charged with the implementation of this resolution.~~

### **SECTION FOUR (APPENDIX):**

“Mr. Hurt used AI to make the homework's sound more sophisticated.” – Anonymous MSMS Junior

“My objection to the practice is that AI generated resources are mostly untested and typically generated last-minute and on-the-fly, as it were, and that's clearly not a ‘best practice.’” - Mr. Funderburk, Physics Instructor
