

PURPOSE: To create a method to report teachers using AI to create graded assignments.

INTRODUCED BY: Tejbir Banipal

BE IT RESOLVED BY THE MISSISSIPPI SCHOOL FOR MATHEMATICS AND SCIENCE SENATE:

SECTION ONE (DEFINITIONS):

An assignment shall be defined as something submitted by a student for a grade.

A “take home” assignment shall be defined as an assignment that can be taken outside the classroom to be completed.

Personally identifiable information shall be defined as the name, date of birth, or other information which could allow a reasonable person to know which student submitted a report.

Reasonable grounds shall be defined as there being some evidence to show that something occurred.

SECTION TWO (REASONING):

In the future, AI could be considered as a tool to help with learning, however currently it is not sophisticated enough to help students learn effectively or to create assignments for students to complete. In its current form if AI was used to create assignments, it could hallucinate causing for it to create questions that are contradictory. When used for grading, the results could be disastrous, due to AI being prone to making things up, it could randomly mark incorrect students work as correct and correct students work as incorrect. This would make the grading system unfair for everyone.

The current method of reporting teachers has not once yielded a report of a teacher using AI, moreover the reporting portal is hidden so far in the MSMS website that it is impracticable to find, and many students might not know it even exists. This proposal directly sends all students an email to report teachers rather than having them go and find the reporting tool on the MSMS website.

This proposal would create a new method for MSMS students to directly report teachers for using AI in an anonymous fashion and, with this reporting method being fully anonymous, students have no fear of retaliation from teachers. Along with this, administration would only receive reports which could be substantiated by the SGA officers, this would mean that administration would only get the reports that are found have merit as to their truth and accuracy.

Finally, this proposal does not force administration to act a specific way, rather it gives them substantiated reports of AI usage to ensure that they know if AI was used. Furthermore, administration has stated that getting these reports would not be burdensome.

This proposal is a step in the right direction to ensure that teachers do not use AI to create or grade assignments.

SECTION THREE (PROPOSED ACTION):

The Student Government Association shall create an anonymous reporting method accessible to all MSMS students within seven (7) days which allows students to submit the following information:

- a) A description of the assignment alleged to have been created, in whole or in part, using artificial intelligence;
- b) A statement explaining why the student believes artificial intelligence was used in whole or in part to create the assignment;
- c) If the assignment is a take home assignment, a photograph of the assignment;
- d) An acknowledgment that the report is made in good faith; and
- e) The first and last name of the teacher who gave the assignment.

A filed report is a report submitted through the anonymous reporting method.

The requirements for a Senator to begin investigating a filed report shall be as follows: the Student Government Association officers must state that they do not wish to investigate the filed report, and the Student Government Association officers must email all Senators stating that they do not wish to investigate the filed report and providing the details contained in the filed report.

A Senator-investigated report shall be a filed report which can be or has been investigated by a Senator.

Within five (5) days after the creation of the anonymous reporting method, a Student Government Association officer, or a person willing to send such email on behalf of the Student Government Association officer, shall send an email containing the anonymous reporting method to all students.

When a filed report is submitted through the anonymous reporting method, the Student Government Association officers may take any of the following actions:

- a) Assign a willing delegate to investigate the filed report;
- b) Investigate the report themselves;
- c) Allow a Senator to begin a Senator-investigated report by completing all the requirements to begin a Senator-investigated report.

When a Senator, willing delegate, or Student Government Association officers decide to investigate a report, they shall make one of three possible determinations once they have concluded their investigation:

- a) There are reasonable grounds to believe the report is factual;

- b) The filed report is not likely to be factual; or
- c) There is not enough evidence to determine if the filed report is factual or not factual.

When investigating a filed report, the investigator shall only be required to determine whether there are reasonable grounds to believe that the filed report is factual. If the person investigating is unsure if the requirement is met, it is recommended that the filed report be determined as there not being enough evidence to determine if the filed report is factual or not factual. Upon completion of these requirements, the first Senator to express interest in investigating the filed report shall be authorized to investigate the filed report.

When a filed report is determined to not have enough evidence to determine if the filed report is factual or not factual, it shall be reinvestigated if the same teacher receives another filed report. The original report shall be reinvestigated as a new filed report.

When a person investigating a report has concluded their investigation, they shall notify the Student Government Association officers via email regarding their determination and may choose to give any supporting evidence they may have gathered to support that determination. The person investigating the report shall also provide a copy of the report to the Student Government Association officers.

Within five (5) days of the end of each month, excluding May, June, and July, the Student Government Association officers shall send all reports that have been investigated and are found to have reasonable grounds to believe the report is factual to administration.

Within five (5) days of the end of each quarter, the Student Government Association officers shall send all filed reports to all Senators and Representatives via email. If an investigation a filed report has concluded, the Student Government Association shall indicate what determination has been made regarding the report, if an investigation has not been concluded on a filed report, they shall not be required to indicate the determination. The Student Government Association officers are only required to present filed reports which have not previously been given to all Senators and Representatives.

Notwithstanding any other provision of this resolution, no member of the Student Government Association, nor any member acting on behalf of the Student Government Association may disclose the personally identifying information of any students filing or substantiating reports for any reason to people outside of the Student Government Association, unless such people are administrators.

SECTION FOUR (APPENDIX):

“Mr. Hurt used AI to make the homework’s sound more sophisticated.” – Anonymous MSMS Junior

“My objection to the practice is that AI generated resources are mostly untested and typically generated last-minute and on-the-fly, as it were, and that's clearly not a ‘best practice.’” - Mr. Funderburk, Physics Instructor

~~“Attend every Senate meeting, upload bills and resolutions to the SharePoint, keep up with OneDrive and ensure it is organized.”—Alexis Freeman, SGA Secretary~~

“There is no harm if administration gets reports of AI usage by teachers from students” -Dr. Easterling
